

PROJECT #1

FRUITBUG

Name your file:
lastname_proj1.psd

To combine different images (organic items i.e. fruits & vegetables) in Photoshop to create an interesting new and very unusual creature/insect, on an interesting background. This creature is to be made up of different fruits and other organic products. Make the image as **WEIRD** as you can. This is your chance to let your imagination run **WILD**. I am looking for **PERFECT** selections using the selection tools we have learned thus far in Photoshop. I want to see **WAY OUT** concepts that will dazzle the viewer. Remember excellent selections are expected! I will really **ZOOM** way in in to see your work, so be precise!

Step 1: COLLECT 20+ images from the Internet, and 10 of your own photos. Utilize your own photography, stock photography or images from your past photo collection.

Requirements:

1. Dimensions: 11x17" (portrait) or 17"x11" (landscape) @ 150 dpi (minimum)
2. **SKETCH** ideas on real paper, not computer.
3. **LOOK** at previous student work.
4. **KEEP** all original images intact and un-edited in a folder called **originals**.
5. **CREATE** a **separate** folder for each bug you create and inside that folder have a **separate** layer for each **separate** part of the bug. Copy any selections you make to new named layers. I expect detailed parts on each bug.
6. **USE** stock photography on the web, take your own photos, or use existing high quality images you may already have.
7. **CREATE** an interesting background/environment for your piece.
8. **USE** color adjustments, transformation tools to scale/rotate/flip, and duplicate bugs as needed.
8. **THINK** about composition--the placement of your bug(s) on your piece.
9. **NAME** your file: lastname_proj1.psd.
10. **DO NOT MERGE LAYERS**. This is how I will be able to grade you on your work so I can judge whether or not you made a good selection. Use as many layers and folders as needed to be organized.
